

ConteraCMR® High Performance NVR Server

80TB Max Storage Cloud Managed Recorder with Dual NIC, 128* Max Channel Count, and Rack Mountable

ConteraCMR® high performance cloud managed NVR servers are designed to offer maximum performance and reliability, paired with the powerful features and functionality of the ConteraWS® Web Services platform. These 2U servers offer higher channel counts (up to 128*) and feature enterprise options like front removable drives, redundant power supplies, dual SSD OS drives, and RAID5.

High performance NVR servers come preloaded with ConteraVMS® Server software and run the Microsoft® Windows® 10 operating system. These high power servers are enterprise level HD IP recorders with the increased processing and throughput capabilities needed to handle larger channel count, storage, and remote usage requirements.

Enhance the functionality of your server even further by pairing it with ConteraWS Web Services which allows you to centralize user management, monitor the health of your recording system, and take advantage of time saving feature like online export and video or clip file sharing. There is no need to write, remember, or type IP addresses and other network information for remote connections. Simply enable ConteraWS on your recorder, and then connect using the ConteraWS Web Client to manage recorder configurations and user access.

Centralized User Management

ConteraWS provides secure storage of all user profile information, allowing role-based management for hundreds of users and device permissions.

Health Monitoring

Cloud-based health monitoring ensures your cameras and recorders are working properly and minimum recording retention levels are being met.

Alerts and Reports

ConteraWS grants insight into operational events at recorder locations and provides valuable business intelligence based on customer or employee activity.

Single Sign-on

Log into ConteraWS Web Services, ConteraVMS, and Arecont Vision Mobile using the same email address and password.

Clip Sharing

Export video clips to the cloud so they cannot be overwritten or lost. Share video clips via email with password protection.
